```
which is cat kidney disease marker. Also described: (1) a partial peptide (II) (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) comprising (III); (4) a transformed host (V) comprising (III) or (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) which couples specifically with (I) or (II); (7) diagnosing cat kidney disease which involves measuring (I) quantitatively, and where reduction of amount of (I) indicates presence of the disease; (8) a cat kidney disease diagnostic agent comprising (I) labelling agent, a reagent which measures the biological activity of urinary (I) or (VI); and (9) a cauxin detection kit which measures cauxin in a test sample. (I) is useful as a cat kidney disease marker and (VI) is useful for diagnosing cat kidney disease. (I) enables detection of cat kidney disease, and replaces complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, block testing

standard;

protein;

The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. The activity of polypeptides of the invention may be described as, cycostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, neuroprotective, immunosuppressive, haemostatic, antiinflammatory, cardiant, antiulcer, virucide, antithyroid, cerebroprotective, amorectic, and metabolic. Polypeptides and polymucleotides of the invention are wound healing disorders, infection, atherosclerosis, Parkinson's disease, command healing disorders, infection, atherosclerosis, Parkinson's disease and Alzheimer's disease, autoimmune disorder, haematopoletic disorder, inflammation, neoplastic diseases, nervous system related disorders and cardiovascular disorders, pancreatitis, respiratory disorder, paper laminativ, pastrointestinal ulceration, neuropathy. CC haematological diseases, metabolic diseases, hyper-lamunition, thyroid disorders e.g. hypothyroidism, brain damages, colitis, cone photocransduction deficiency, neurological diseases, stroke, angiogenesis,

                                                                               The invention relates to a purified human carboxylesterase-like enzyme control of the invention relates to a purified human carboxylesterase-like enzyme and its DNA are useful for screening for agents which decrease or modulate the activity of carboxylesterase-like enzyme is carboxylesterase-like enzyme is useful for treating a carboxylesterase-like enzyme dysfunction related control of the compounds that increase the ability of human carboxylesterase-like enzyme to bind to organophosphorus compounds are useful as detoxifying agents. Carboxylesterase-like enzyme agonists and antagonists are useful for treating osteoporosis, Paget's disease and degradation of bone implants, carboxylesterase-like enzyme is useful in diagnostic assays for detecting disease and degradation of bone implants, carboxylesterase-like enzyme is useful in control of the presence of compounds in the nucleic acid sequences which encode the enzyme. The coding sequence of carboxylesterase-like enzyme polynucleotide is useful in gene therapy and for generating antisense oligonucleotides or carboxylesterase-like enzyme specifically bind to mRNA transcribed from carboxylesterase-like enzyme gene expression. The present sequence is rat carboxylesterase-like enzyme expression. The correspondence is rat carboxylesterase-like enzyme expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequences AAF21614 - AAF22031 represent DNA sequences encoding human CC proteins AAB58711 - AAB59128. The DNA and protein sequences are CC associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the CC isolation and characterisation of the DNA and protein sequences of the CC invention. The breast and ovarian cancer associated DNA, protein, agonist CC entragonist sequences exhibit cytostatic; immunosuppressive; nontropic; antidiabetic; antifingal antiparastic and cardiant activity. The polynucleotide and CC protein sequences are used in the diagnosis of cancer, particularly CC protein sequences are used in the diagnosis, prevention and treatment CC and agonists may also be used in the diagnosis, prevention and treatment CC immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, autoitis, diabetes mellitus, Crohn's CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; cardiovascular disorders such as myocardial ischaemias; wound healing; information advances such as cerebral anoxia and epilepsy; and
